Separate SSR items are required for each passenger, if applicable.

SSRs may be segment associated using automated format or may apply to all segments for the actioned carrier using non-automated format.

Airline code “YY” is not permitted.

The agreed maximum set of data elements for the transmission of the advanced passenger information (API), as defined by the WCO/IATA/ICAO Advanced Passenger Information Guidelines (Section 8), are summarised as follows:

3.14.2 API — Passenger Other Supplementary Information

3.14.2.1 Definitions

Visa and Place of Birth are the elements that may be included as other supplementary passenger information.

A Visa is considered a supplementary travel document and must be used in conjunction with a travel document such as a Passport.

If required, element *Place of Birth* requires manual data capture methods as it is located in the visual zone of a passport and is identified using the full place name. Place of Birth may also include the country code.

Element *Visa issuing Country/State* must be provided in situations where a passenger is travelling to two or more Countries/States requiring separate Visa documents. This element is a data collection requirement and is needed in order to provide the correct Visa information for the relevant Country/State information.

3.14.2.2 Construction Rules and Sequence of Components — Non-Automated Format

An oblique (/) is inserted between each of the elements following (e) *Number in Party*. Where the components of the other travel related information are not provided, an oblique (/) is inserted to indicate an element is missing. This is not required when no further components are provided.
